Land Assessment/ Sales Ratio Study and Equalized Assessments 1986

Alberta
ASSESSMENT
EQUALIZATION BOARD

87-02313/

FORWARD

The land assessment/market value ratio data provided in this study, has been developed for each municipal jurisdiction in the Province of Alberta through an assessment/market value analysis completed by the municipality's appointed assessor. The analysis, which measures the relationship of land assessment to market value in 1984, is completed pursuant to the Municipalities Assessment and Equalization Act and is employed in the determination of the 1986 EQUALIZED ASSESSMENTS.

Equalized assessments are used as the basis for collecting revenue for the Provincial School Foundation Fund, the allocation of supplemental costs amongst all school and hospital jurisdictions, the Alberta Planning Fund and other taxing authorities who may have cost-sharing programs.

The assessment/market value ratio study provides pertinent data on the quality of assessment for property owners as well as Municipal Officials. Insight provided by this study is invaluable in the maintenance of assessment uniformity within and amongst municipalities.

Rene Gagne, Chairman, A.M.A.A.
Assessment Equalization Board

ALBERTA MUNICIPAL AFFAIRS
ASSESSMENT EQUALIZATION BOARD

PART I

DEVELOPMENT OF ASSESSMENT/MARKET SALES RATIO STUDIES

It is of paramount importance that maximum equity be attained between individual property owners and among taxing jurisdictions to ensure the proper distribution of the tax burden.

Assessment/sales ratio studies are conducted, to determine the relationship of land assessment to market value. This relationship, expressed as percentage, is used by the Assessment Equalization Board in the calculation of equalized assessment for each municipality in the Province of Alberta.

A secondary and equally important use for the analysis is in the inspection and maintenance of assessments to insure an acceptable level if equity within each municipality.

Information contained within this report is compiled from the Alberta Assessment Equalization Board files.

PART I

DEVELOPMENT OF ASSESSMENT/MARKET SALES RATIO STUDIES

It is of paramount importance that maximum equity be attained between individual property owners and among taxing jurisdictions to ensure the proper distribution of the tax burden.

Assessment/sales ratio studies are conducted, to determine the relationship of land assessment to market value. This relationship, expressed as percentage, is used by the Assessment Equalization Board in the calculation of equalized assessment for each municipality in the Province of Alberta.

A secondary and equally important use for the analysis is in the inspection and maintenance of assessments to insure an acceptable level if equity within each municipality.

Information contained within this report is compiled from the Alberta Assessment Equalization Board files.

ASSESSMENT EQUALIZATION

Assessment equalization is a procedure established by the Province of Alberta to measure property wealth of each municipality. This is accomplished by converting each municipality's over-all property assessment to a common level.

Municipalities are involved in a number of cost-shared programs by which each municipality, based on its equalized assessment, contributes an equitable amount of funding for operational programs such as schools, hospitals, community recreation and land planning.

It is not presently feasible to assess all properties in the province at the same time and therefore it is impossible to ensure that the level of assessment in one part of the province is at precisely the same level of value as that in another part of Alberta. For example, buildings may be depreciated to different years. Land assessment is based on market value which varies with time. As a result, the relationship of assessment between one municipality and another may not be the same. Used as the basis for cost sharing, a variation between assessments would create a disparity in the amount contributed by each municipality to various cost-shared programs.

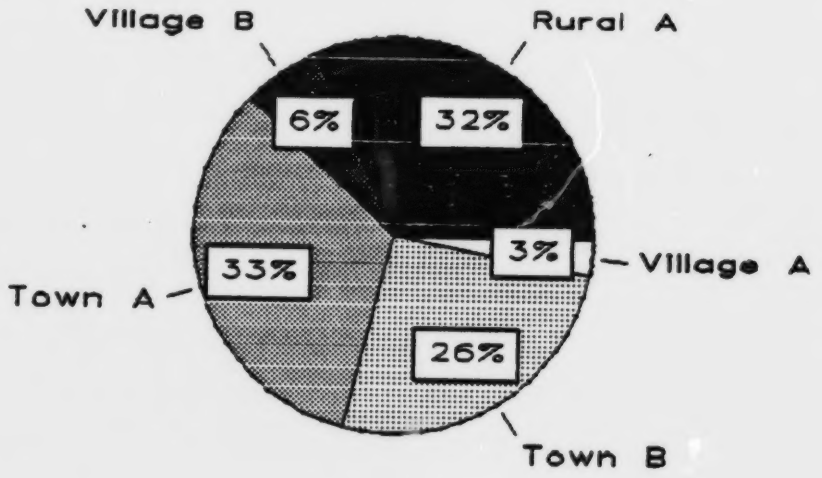
Assessment of all properties, with the exception of land, is based on depreciated average cost. In the equalization process, construction costs are indexed to reflect modern conditions. A similar procedure is applied in equalizing farm land assessments that are rated on the basis of cost related economic factors. Non - farm land is assessed using local market value as the criteria. Asssessment / market value studies are required to accommodate the equalization of land assessment.

To correct any differences in the level of assessment, the provincial government established the Assessment Equalization Board. This body reviews a municipality's assessment level each year, compares it to the local market value and establishes the equalized assessment by converting it to the provincial level.

Equalized assessments are then used by the requisitioning jurisdiction as shown in illustration A.

HOW REQUISITION IS ALLOCATED USING EQUALIZED ASSESSMENT FIGURES

Total Requisition Required $500,000



Municipalities Contributing	Equalized Assessment	% of Total Eq.	Share of Req.
Rural A	$21,288,900	32%	$160,000
Town A	22,190,600	33%	165,000
Town B	17.280.150	26%	130.000
Village A	2,180,660	3%	15,000
Village B	4,270,130	6%	30,000
	$67,210,440	100%	$500,000

Illustration A

SUPPLEMENTAL USES OF STUDIES

The assessment/market value ratio study is carried out to determine assessment levels for cost-shared purposes, but the studies may provide a wealth of information for property tax administrators as well as the taxpayer. For the assessor, these studies provide an insight into variations that may exist among assessments of specific properties within common land use zones, as well as between different areas or municipalities, a first step toward correction of inequities. For example, the information contained in this study may be beneficial as a means of comparing assessments for conformity between municipalities that are located within common requisitioning jurisdictions such as school divisions or hospital districts.

With respect to property owners, assessment/market value ratio studies provide support to their claim for a more fair and uniform treatment. Legislative bodies may be interested in the information developed from these studies for use in ascertaining effective tax rates and tax limits based on either the assessed value or indicated market value.

PROCEDURES IN DEVELOPMENT

In order to develop accurate and reliable statistics for use by assessment personnel, the Assessment Equalization Board, or taxpayers, the full cooperation of property owners and public officials is required. Results of these studies are dependant upon the quality of the source data and therefore pertinent reliable real estate information is a pre-requisite.

In the development of the studies, a number of procedural steps are employed as follows:

1) basic data on real estate transfers is gathered,

2) information is carefully screened and edited to exclude all transfers except those that represent arms-length transactions,

3) relevant data is prepared, sorted and listed by real estate categories for each municipality,

4) data is totalled and meaningful statistical computations made to describe the information.

GATHERING OF MARKET DATA

The first and most important step in conducting the assessment/market value ratio study is the collection of timely, reliable data on all "arms-length" real estate transactions. It is estimated that approximately 122,000 real estate transfers occur annually in Alberta. Basic data is found on the Transfer of Land form used in preparation of the property title. Provincial law requires an Affidavit of Transfer as a pre-requisite to recording a real estate transfer instrument pursuant to the Land Titles Act. The basic data provided by the Transfer of Land form is outlined as followed:

1) Name, address and occupation of transferor.

2) Legal description of property.

3) Name, address and occupation of transferee.

4) Purchase date of property transferred.

5) Full consideration paid (sale price) or to be paid including any liens.

6) Amount of mortgage assumed.

7) Condition of transfer, that is, transmission of estate, gift, company, out of Province.

8) Transferee opinion of fair market value.

As soon as a new title document is issued a copy is forwarded to Alberta Municipal Affairs for screening and editing.

COMPILIATION OF DATA

Alberta Municipal Affairs transfers the information from land titles documents to the computer to be sorted by municipality and legal description. The computer then produces a market analysis form containing the following data:

- legal description of property
- date of sale
- acreage size
- opinion of market value as noted by transferee
- whether an estate transmission
- whether a company transfer
- whether a crown of crown agency transfer
- out of Province sale
- partial interest
- leasehold interest
- Canadian land inventory one.

The land assessment/market sales ratio survey is based upon the average market value in the year prior to the assessment year. For example, the 1986 assessment/market value ratio study is based upon transactions which occurred during 1984.

The volume of property sales during a one year period are often not adequate to provide a usable sample for a particular area or property type and there is a need to supplement them with sales from other years. This is done by utilizing both the sales from the previous year and from the current year to provide a trended indication of value. If sales deviate significantly from the normal market pattern an inspection is made to determine the cause. The cause is then isolated and an appropriate adjustment made to the selling price.

The need for on site examination of properties sold or for development of supplementary data occurs most often in the market analysis of commercial and industrial properties. A limited number of vacant site transfers occur and therefore the appraiser must utilize improved sales which often include obsolete buildings, non-assessable items, etc. An effort is made to evaluate that portion attributable to land value through a personal interview of the buyer or seller.

To obtain supplemental data on commercial and industrial properties, sales for several years may be used. An appropriate adjustment is made to reflect changes in the price between the sale date and the period being studied. If additional data is required to obtain a sufficient sample, opinions are developed using various appraisal techniques, such as the income approach, to analyze the probable value of unsold parcels. Opinions of value expressed by realtors are also used. It is recognized that the opinion of the appraiser is not as objective as one based on actual sales data however, because the major portion of the data used comes from edited real estate transfers, the results of these studies are felt to be reliable and accurate.

INFORMATION SORTED AND LISTED

The relationship between land assessment and its market value is calculated for each usable real estate transfer. Individual ratios are then arranged in order of magnitude and listed by various classes of properties within the municipality. Within given areas or property classes, the individual ratios tend to be grouped around the mid or average, range of ratios. Data producing extreme high or low ratios is isolated for further review. It has been found that assessment/market value ratios at the exteme high or low end of the sample, are normally usable and therefore not excluded from the studies. If transfers are abundant for the various classes of property in an area doubtful transactions are discarded without further investigastion. In other areas, in order to secure an adequate number for the sample, questionable transfers are investigated further to determine their usability.

After the assessment/market value ratios are screened for extremes and defective data extracted, the balance is organized and compiled for statistical analysis. The analysis is intended to provide a basis for:

1) comparing the level of assessments for several classes of property in individual municipalities, and

2) judging the quality of assessments among the different land classifications within each area.

The statistical measures used for measuring the average assessment/sales market relationship are: Mean, Median and Mode. Results are described as percentages.

PART II

STATISTICS OF ASSESSMENT MARKET VALUE RATIO STUDIES

One of the primary objectives in a property tax administration is to maintain the assessment of property on an equitable basis. Non-uniform assessment results in unwarranted tax shifts among property owners. An equitable distribution of the tax burden is achieved only if built upon uniform assessments.

It is exceedingly important that equalization be attained not only among local property owners but also between taxing jurisdictions since properties valuations also serve as a basis for:

1) allocating equalized assessment to different jurisdictions that have overlapping boundaries.

2) determining authorized levies that are restricted to statutory tax rate limits.

3) apportioning Provincial assistance to local governmental units, such as the municipal assistance grant or the SREG (school) grant.

In order to accomplish equalization, reasonably accurate and acceptable statistical procedures are necessary. The technique most commonly used to measure the degree of assessment inequality is that of determining the assessment/market value ratio; the relationship between the assessed value and the market value of particular parcels of property sold.

Additional data, developed using appraisal techniques and opinions of value, may be required to supplement sales data. For purposes of this study, "Indicated Market Price" refers to data accumulated through all resources.

The aggregate of individual assessment/market value ratios for an area or property class is described as an average. Usually three averages are considered: the mean, median and aggregate with the mode being used to establish a trend. These averages, or measures of central tendency, provide a simple numerical value descriptive of how closesly a group of individual assessment/market value ratios approach the prescribed statutory level.

The assessment/market value ratio for an individual parcel of property sold is simply the relationship, expressed as a percentage, between the assessed value and the indicated market price. For each parcel of real estate sold, the assessment/market value ratio is found by dividing the assessed value by the full consideration paid.

Parcel	Assessed Value	Indicated Market Price	Ratio
1	$ 1,870	$5,500	34.0
2	2,000	6,000	33.3
3	760	3,000	25.3
4	2,000	6,000	33.3
5	2,260	6,400	35.3

MEAN ASSESSMENT/MARKET VALUE RATIO

The mean, or arthimetic average, is a measure of central location and provides a simple numerical value descriptive of a group of individual assessment/market value ratios. The mean is derived by computing the assessment/market value ratio for each parcel of property sold, adding these ratios together and dividing the total by the number of sales parcels in the sample.

Parcel	Assessed Value	Indicated Market Price	Ratio
1	$ 1,870	$5,500	34.0
2	2,000	6,000	33.3
3	760	3,000	25.3
4	2,000	6,000	33.3
5	2,260	6,400	35.3
			161.2

161.2 divided by 5 = 32.2 Mean

The mean is the most commonly used, easily understood average, but the fact that it is easily affected by one extreme ratio can lead to serious consequences. If the market data collected is abundant, accurate and representative, extreme high and low individual assessment/market value ratios will not distort this average.

MEDIAN ASSESSMENT/MARKET VALUE RATIO

The median, is a measure of central tendency used to describe a group of individual assessment/market value ratios. The median is found by arranging the individual ratios in order of magnitude from highest to lowest, then selecting the middle ratio in the series.

Parcel	Assessed Value	Indicated Market Price	Ratio
5	$ 2,260	6,400	35.3
1	1,870	5,500	34.0
2	2,000	6,000	33.3 Median
4	2,000	6,000	33.3
3	760	3,000	25 3

The median, unlike the mean, is not so readily affected by; an extreme individual ratio. The median for a group of assessment/market value ratios depends on the position of items in the distribution rather than their magnitude, therefore undue influence is not given to usually high or low ratios. This feature is desirable due to the difficulty in identifying sales, that if the facts were known, would be discarded as unusable.

AGGREGATE ASSESSMENT/MARKET VALUE RATIO

The aggregate, or weighted average, is computed by dividing the total assessed value for the properties sold by the total sale price of those properties.

Parcel	Assessed Value	Indicated Market Price	Ratio
1	$ 1,870	5,500	34.0
2	2,000	6,000	33.3
3	760	3,000	25.3
4	2,000	6,000	33.3
5	2,260	6,400	35.3
	$ 8,890	$26,900	

8,890 divided by 26,900 = 33.0 Aggregate

In the aggregate average, unlike the mean, each property sold is weighted through its indicated market price. Higher priced properties influence the average to a greater extent than lower priced properties. This effect is justified if the mix of higher priced properties in the sample is respresentative of the mix of higher priced properties in the municipality.

THE MODE ASSESSMENT/MARKET VALUE RATIO

The mode, like the mean and median, is a measure of central tendency used to describe a group of individual ratios. The mode is also referred to as the trend of a series of ratios. The mode is arrived at by arranging individual ratios in order of magnitude, then selecting the ratio which occurs most often.

Parcel	Assessed Value	Indicated Market Price	Ratio
5	$ 2,260	$6,400	35.3
1	1,870	5,500	34.0
2	2,000	6,000	33.3
4	2,000	6,000	33.3 Mode
3	760	3,000	25.3

As 33.3 occurs more often than any other ratio, it is assumed to reflect the mode. Again the mode like the median is not affected by the extremes and therefore it is not influenced by unusually high or low ratios. There is a danger, however, of establishing a high or low trend in relation to the total number in a series and caution should be exercised when utilizing this statistical measure.

PART III

LAND ASSESSMENT TO 1984 MARKET RELATIONSHIP BY MUNICIPALITY

The following is a listing of land assessments categorized into four major groups consisting of:

- Commercial
- Industrial
- Residential
- Vacant Residential

The relationship of assessment to average market value and respective final indicted market values are shown adjacent.

The overall assessment/market value relationship of land subject to equalization is calculated by dividing the sum of the land assessments by the sum of the indicted market value and is shown as an overall percentage for each municipality.

Land subject to the School Foundation Levy is treated in the same manner excluding the "residential" category.

Data in this section is listed in municipality code order by Counties, Cities, Improvement Districts, Municipal Districts, School Districts, Summer Villages, Towns, and Villages.

Also shown are 1984 population statistics, the effective year of the last general assessment and the base assessment rates used at the time of the last general assessment.

As listed hereunder are the proposed 1987 general assessments for the following municipalities:

Cities	Towns	Counties	M.D.'S
Calgary	Grande Centre	Athabasca #12	Clearwater #1
Edmonton	Granum	Paintearth #18	Willow Creek #26
Camrose	Lamont	Strathcona #20	Foothills #31
Ft. McMurray	Olds		Wainwright #61
Leduc	Sylvan Lake		Sturgeon #90
Lethbridge	Vermilion		Cypress #99
	Whitecourt

PART IV

BREAKDOWN OF ASSESSMENTS BY CATEGORY

The Breakdown of Assessments by Catagory Report is an inventory of the 1985 taxable assessment used in determining equalized assessments for 1986.

Assessment information, classified for use in assessment/market ratio studies and the assessment equalization calculation procedure, is submitted to the Alberta Assessment Equalization Board by each municipality annually.

Neither the valuation of exempt properties nor assessment and valuation of pipeline, cable television line, Alberta Government Telephone line, and power line is shown.

Machinery and equipment assessment is listed under M & E and SFP refers to the Provincial School Foundation Fund.

PART V

EQUALIZED ASSESSMENT BY MUNICIPALITY

The 1985 property tax assessments and exempt property valuations upon which grants in lieu of taxes are paid, have been used in determining 1986 equalized assessments. The Synopsis of Worksheets Report lists these assessments and valuations together with equalized assessments for each municipality and that portion of affiliated school and hospital jurisdictions located within the municipal boundaries.

Pipe, Cable, Alberta Government Telephones (AGT), and Power Line assessments and valuations and corresponding equalized assessments are not included in the school or hospital allocation.

School Foundation Program Fund (S.F.P.) information is provided on the last line following each municipality's Hospital and School listings.
